

Claims

1. A coaxial cable comprising: a dielectric layer formed around a center conductor; an outer conductor layer formed around the dielectric layer; and a sheath formed around the outer conductor layer,

characterized in that a metal foil for providing enhanced shield effect and shape maintainability is formed between said dielectric layer and said outer conductor layer.

2. A coaxial cable as set forth in claim 1,
characterized in that said metal foil has a thickness of 1 % to 5 % of the outer diameter of said dielectric layer.

3. A coaxial cable as set forth in claim 1,
characterized in that said metal foil is longitudinally arranged around said dielectric layer between said dielectric layer and said outer conductor layer.

4. A coaxial cable as set forth in claim 1,
characterized in that said outer conductor layer is braided.
